

ALSAI representatives attend the 17th Meeting of the EUROSAI IT Working Group (ITWG)

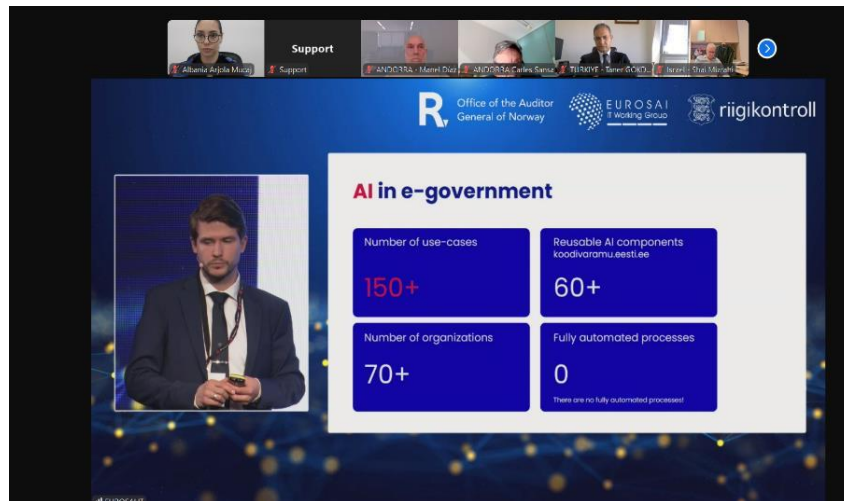

On 24–25 September, the 17th Meeting of the EUROSAI IT Working Group (ITWG) was held in Oslo, in close cooperation between the Supreme Audit Institutions (SAIs) of Estonia and Norway. The meeting was conducted in a hybrid format, with both in-person and virtual participation.

During the two-day meeting, a seminar entitled “Smart Auditor in an Artificially Intelligent State (Auditing AI)” was held and made accessible to all INTOSAI members. The seminar adopted a twofold approach, focusing on both the audit of Artificial Intelligence-based solutions and the use of AI technology within SAIs.

During presentations delivered by experts from various SAIs, information was provided on the opportunities and risks associated with Artificial Intelligence (AI), as well as practical AI use cases. Some of the topics addressed during the presentations included:

- The Norwegian Government’s approach to AI;
- The use of AI in government – the British perspective;
- Implications of European AI policies for governance and auditing – SAI Slovenia;
- Parallel audit on AI – SAI Israel;
- AI use cases and the challenges associated with them – SAI Germany;
- Implementation of an AI audit tool based on Large Language Models (LLMs) – SAI France;
- Innovative financial auditing using AI;
- AI in auditing – SAI Switzerland.

The ITWG (IT Working Group) Business Meeting, scheduled for the second day of the event, was reserved for members and cooperating partners to discuss ITWG's ongoing and planned projects. The meeting was organized in a workshop format, with both in-person and virtual participants divided into groups to discuss three key issues:

1. Examples of the use of Artificial Intelligence;
2. Unique challenges in auditing Artificial Intelligence;
3. The purpose of using AI in training programs.

Virtual participants, making full use of the features available on the Zoom platform, were able to respond to several online polls concerning the use of Artificial Intelligence in their respective countries, regulatory policies, the areas in which AI had begun to be implemented, and other related issues. This session concluded with presentations by the SAIs of Portugal, Switzerland and Germany.

As a SAI member of the Working Group, ALSAI was represented by Klea Saliu and Arjola Muçaj, auditors from the Information Technology Audit Department.
